No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                              June 4, 2004, 16:49:08; Search time 245 Seconds (without alignments) 4.079 Million cell updates/sec

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, detecting the presence of tumor in a mammal, or modulating the uptake of glucose or free fatty acid by skeletal muscle cells or adipocyte cells.

Claim 2; Fig 375; 660pp; English

541

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the release of INF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of condrocyte cells, for stimulating the proliferation of inner ear uritular supporting cells, for stimulating the proliferation of finner ear uritular supporting cells, for stimulating the proliferation of finner ear uritular supporting cells, for stimulating the proliferation of finner ear uritular supporting cells, for stimulating proliferation of finner ear uritular supporting cells, for stimulating proliferation of adipocyte cells, for stimulating proliferation of an inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endochelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for stimulating proliferation of endochelial cells, for detecting the prosess of a sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding increarcion. A polymucleotide (II) encoding (I) is useful in chromosome proparation of PRO puppetide, for generating transgenic animals or knockout animals which in turn are useful in the development and chromosome identification, as chromosome marker, and for generating cornomosome identification, as chromosome marker, and for generating sequence or attimated sources. (I) and (II) are useful in diagnostic assays for PRO, ergonomosome in a secreted and transmembrane PRO polypeptide. 420 420 480 600 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGGCGCCACCCTCAG Grecactarreacaaccecercacceeresceresceresceraaccecaccaccarcerea TGCTGGGAATGACAAGTGGTGCTCGGATCCTCGCGTGGTCCTTCTGAGCAACACCCCAAAAC 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAATGCACAATTCTATCTCTTGGGCAAT CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCCACCTCAG GIGCACIAITGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCTTA GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGACACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC CTTCACGGGGCTGCTCTCTGTCTCTTTCCAAGGAGTGCCCGTGCGCAGCGGAGATGC CITCACGGGGCTGGCTGCTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGAAGAAGTGC TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC egrecadadadadaccaccadadaccrcradegrecaccrcarrerecadadadada GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC Gaps . 0 Query Match

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

useful for stimulating the proliferation of or gene expression in

pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful

cells. PRO311, PRO357, PRO125, PRO1272 or PRO4405 polypeptide are useful

cells. PRO312, PRO357, PRO125, PRO1180, PRO1419 polypeptide

cells. PRO313, PRO526, PRO912, PRO1805, PRO19149, PRO1419, PRO214,

PRO1478, PRO131, PRO526, PRO3157, PRO1805, PRO1806, PRO1419, PRO1419,

PRO1478, PRO131, PRO126, PRO1806, PRO1919, PRO1411, PRO1412,

PRO1478, PRO1319, PRO1186, PRO1186, PRO1373, PRO1979, PRO1419, PRO1318,

PRO136, PRO1376, PRO1377, PRO1409, PRO1474, PRO1379, PRO1412,

PRO186, PRO1376, PRO1367, PRO1409, PRO1474, PRO1917, PRO1444, PRO4322,

CR PRO1887, PRO1928, PRO4341, PRO1409, PRO1474, PRO1917, PRO1460, PRO186, PRO9836 or PRO10096 polypeptide are useful for stimulating the proliferation of normal human dermal fibroblasts cells.

CR PRO181, PRO5229, PRO7184, PRO4415, PRO1742, PRO4488, PRO4408,

CR PRO1828, PRO5729, PRO7184, PRO4415, PRO1747, PRO4481, PRO4412, PRO5723, PRO5723, PRO5724, PRO44184, PRO4322, CR PRO5723, PRO5724, PRO44184, PRO4322, CR PRO5723, PRO5724, PRO44184, PRO4432, PRO44184, PRO44184

is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or tumour. (1) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This sequence encodes a human secreted and transmembrane
                                                                                                                                                                                                                                                                                                                                                                              120

WPI; 2003-786938/74. P-PSDB; ADB38116. PRO nucleic acid, useful for preparing a recombinant PRO polypeptide for manufacturing a medicament for diagnosing or treating tumor.

Claim 2; Fig 375; 637pp; English.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the creams of TYF-alpha from human blood, for modulating the uptake of glucose of FRA by skeletal musche cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of flacer cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endotholial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, cervical or liver tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, cervical or liver tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, cervical or liver tumour is lung, colon, breast, cervical or liver tumour. The oligomiclectide probes are useful for isolating genomic and cDNA nuclectide sequences or in assays to identify other proceins or molecules involved in binding increaction. A polymerolectide (II) is encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the conformation of encoding transgenic animals which in turn are useful in diagnostic assays for pRO, e.g. detecting its expression in specific cells, itssues or serum, and for chromosome denting the expression in specific cells, itssues or serum, and for sources. (I) and (II) are useful for tissue typing. This equence encodes a novel human secreted and transmembrane PRO polypeptide.

```
The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the creases of TMF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of miner ear utricular supporting cells, cor stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of E-lymphocyte cells, for stimulating the proliferation of E-lymphocyte cells, for stimulating the proliferation of E-lymphocyte cells, for stimulating cells, for inhibiting the binding of the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for stimulating genomic and cDNA nucleotide sequences or attemers probes. (I) is also useful steparetion of adentify other proteins or molecules involved in binding in assays to identify other proteins or molecules involved in binding interaction. A polymucleotide (II) encoding (I) is useful in the development and configuration of PRO polypeptide, for generating therapeutically useful reagents, in gene therapy, for knockout animals which in turn are useful in the development and configuration is chromosome marker, and for generating cromosome identification, as chromosome marker, and for generating or chromosome identification, as chromosome marker, and for generating configuration of PRO polypeptide, for generating tells expression in generating cells, itsues or serum.

Configures. (I) and (II) are useful for tissue typing. This sequence encodes or any uniman secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Gao W;

501

The invention relates to human PRO polypeptides (secreted and transmambrane polypeptides) and the PRO polypuclectides encoding them.

The PRO polypeptides and polymuclectides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumnour, rectal tumnour colon tumnour, breast tumnour, prostate tumnour, retail tumnour or liver tumnour) in a mammal, for prostate tumnour, rectal tumnour or liver tumnour) in a mammal, for stimulating the release of tumnour necrosis factor (TNP) alpha from human blood, for stimulating the proliferation of or gene conditoryte cells, for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene captures in chromosome and gene mapping, in generating cantisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which antisense RNA and DNA, in preparing RNO polypeptides by recombinant captures and in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, such as perioyte-associated tumnours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyte-associated tumnours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-disorders (e.g. arthritis, sports injuries), involving inducing the re-disordernel electrophoresis, and in tissue typing. This equence represents a human PRO polypeptides are useful as ¥8888888888888888888888888888888

(GETH) GENENTECH INC

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in penerating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful section in the development and screening of therapeutically useful medicament for treating a condition responsive to the polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells, for modulating or finner ear unricular supporting cells, for stimulating the proliferation of inner ear unricular supporting cells, for stimulating the proliferation and inner ear unricular supporting cells, or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating

various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymoclecide of the invention. Note:

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, and in the detection and treatment of tumor in a mammal.

3 Gao transmembrane polypeptides) and the polymucleotides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO propeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMR-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for cetecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as this antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for

stimulating differentiation of adipocyte cells, for stimulating the proliferation of or gene expression in periotte cells, for stimulating the proliferation of numer ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, polypeptides are also useful for treating sports-related joint problems, polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalasseemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence erpresents a human PRO polymucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at sequence.html.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the transmembrane) polypeptides (I). (I) is useful for stimulating the roman blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte calls, for stimulating the proliferation or differentiation of chandrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear uticitular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of for I-lymphocyte cells, for stimulating the proliferation of GT-lymphocyte cells, for stimulating the proliferation of endothelial cells, for dispocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligomolecutide probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gao W;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New secreted and transmembrane PRO polypeptide useful for detecting presence of tumor in a mammal, or modulating the uptake of glucose of free fatty acid by skeletal muscle cells or adipocyte cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Ge

in assays to identify other proteins or molecules involved in binding interaction. A polynucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of RNO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and sorrenhing of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for RNO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide.

The invention describes an isolated PRO (secreted and transmembrane)

CD polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of compare expression in
bericyte cells. PRO357, PRO222, PRO1325 polypeptide are useful
for stimulating the proliferation or differentiation of chondrocyte

CC cells. PRO357, PRO725, PRO1185, PRO1195 polypeptide

TRO247, PRO131, PRO556, PRO982, PRO1185, PRO1196, PRO1419, PRO1419,

PRO5732, PRO5732, PRO7164, or PRO7455 polypeptide are useful for crimibiting the pro11feration of normal human dermal fibroblast cells.

CR PRO1891, PRO5732, PRO748, PRO1484, PRO1744, PRO5778, PRO5778,

PRO5732, PRO5732, PRO5745, or PRO7455 polypeptide are useful for cells taken from the mammal, and a control sample of colls taken from the mammal, and a control sample of colls taken from the mammal, and a control sample of colls taken from the mammal, and a control sample of the PRO polypeptides in the test sample as compared to the control sample of the presence of tumour in the mammal. The tumour is lung the mammal from the mammal from the coll tumour.

CU uned the proper tampent and gene mapping or gene therapy. (II) is useful for thromosome and gene mapping or gene therapy. (II) is useful for properting energial reagents. PRO579, PRO470 and transmembrane energial properting **a**8 PJ; Wood WI; Novel isolated PRO polypeptide useful for tissue typing, gene therapy, molecular weight markers in protein electrophoresis, for treating arthritis, tumor. tumour; (TNF)-alpha release; dermal fibroblast cell proliferation; dermal fibroblast cell differentiation inhibitor; tumour; lung colon tumour; breast tumour; prostate tumour; rectal tumour; lissue typing; chromosome mapping; gene mapping; Gerritsen ME, Goddard A, Godowski F Smith V, Stephan JF, Watanabe CK, Sequence 1679 BP; 498 A; 432 C; 419 G; 330 T; 0 U; 0 Other; Claim 2; Fig 125; 308pp; English. 25-JUL-2000; 2000US-0220607P. 01-JUN-2001; 2001WO-US017800. 29-JUN-2001; 2001WO-US021066. 09-APR-2002; 2002US-00119480. 09-AUG-2002; 2002US-00216165 ŗ. (GETH) GENENTECH INC.

Gerritsen ME, Goddard A, Godowski PJ; Smith V, Stephan JF, Watanabe CK, Wood r, Ar, Baker KP, Desnoyers Grimaldi JC, Gurney Baker KP,

WPI; 2003-657981/62. P-PSDB; ADB87165. One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, or hybridization probes in chromosome and gene mapping.

Claim 2; Fig 125; 314pp; English.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypuclectides encoding them. The PRO polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour, breast tumour, con prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMF) alpha from human blood, for stimulating the proliferation of or gene conditions to stimulating the proliferation of or gene captression in pericyte cells or for stimulating the proliferation of corpus probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which and used in the development and screening of therapeutically useful creagents, in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redisorders (e.g. arthritis, sports injuries), involving inducing the redisordertiation of chondrocytes. The PRO polypeptides are useful as medicular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.

New isolated PRO polypeptides, useful for tissue typing, gene therapy, as molecular weight markers in protein electrophoresis, and for treating arthritis and tumors. WPI; 2003-777259/73. P-PSDB; ADB84747.

2; Fig 125; 308pp; English Claim

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypucleotides encoding them. The PRO polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour, breast tumour, compared tumour necrosis factor (TMF)-alpha from human constituting the release of tumour necrosis factor (TMF)-alpha from human blood, for stimulating the proliferation of or gene conditoryte cells, for stimulating the proliferation of or gene conditoryte cells, for stimulating the proliferation of or gene conditoryte cells, for stimulating the proliferation of or gene conditoryte cells, for stimulating the proliferation of or gene conditisation probes, in oftromosome and gene mapping, in generating cantisense RNA and DNA, in preparing PRO polypeptides by recombinant contisense RNA and DNA, in preparing PRO polypeptides by recombinant contisense RNA and DNA, in preparing the scenning of therapeutically useful creagents, in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, and used in the re-condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-condition which is responsive to the PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.

```
The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the cransmembrane) polypeptides (1). (1) is useful for stimulating the graph mush ealls of adipocyte cells, for stimulating the proliferation of adipocyte cells, for stimulating the proliferation of or gene expression in periorte cells, for stimulating the proliferation of or gene expression in periorte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the reases of acytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal cervical or liver tumour. The oligomucleotide probes antisense probes. (1) is also useful as therapeutic agent. PRO is useful in assays to identify other proceins or molecules involved in binding in assays to identify other proteins or molecules involved in binding and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or

knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes

New secreted and transmembrane PRO polypeptides, useful in the diagnosis and treatment of cancer.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the prosterion or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, collecting the presence of a tumour in a mammal (e.g. adrenal, lung, collecting the presence of a tumour in a mammal (e.g. adrenal, lung, collon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in nolecular biology, including uses as this state of the property of the p

(GETH) GENENTECH INC.

Gerritsen ME, Goddard A, Godowski PJ; Smith V, Stephan JF, Watanabe CK, Wood Desnoyers L, Baker KP, De Grimaldi JC,

2003-777258/73. P-PSDB; ADB73017 Novel isolated PRO polypeptide useful for tissue typing, gene therapy, molecular weight markers, for treating arthritis, tumor.

Claim 2; Fig 125; 308pp; English

The invention describes an isolated PRO (secreted and transmembrane) bolygeptide (1). PRO982. PRO1160, PRO1187 or PRO1329 polygeptide are useful for simulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO357, PRO357, PRO1155, PRO1155, PRO1151 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-

cc alpha from human blood. The present invention relates to the isolation of novel human PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for modulating biological activities of cells expressing PRO polypeptides, for modulating identifying agonists or antagonists. The bioactive molecule maybe a toxin, radiolabel or antibody, and cause cell death. The PRO polypeptides are useful for treating neuropathy and neuropathy related diseases such as Charcot-Marie-Tooth disorder, Refsuw's disease, and Krabbe's disease. The polymucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New PRO polypeptides useful for treating peripheral neuropathy, neuropathies associated with systemic disease such as post-polio syndrome or AIDS-associated syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton DL, Ferrara N, Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME; Goddard A, Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ; Kljavin IJ, Kuo SS, Napier MA, Pan J, Paoni NF, Roy MA, Shelton Stewart TA, Tumas D, Williams PM, Wood WI;

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the cransmembrane from human blood, for modulating the uptake of glucose of FRA by skeletal muscle cells or adipocyte cells, for cales from human blood, can adipocyte cells, for stimulating the proliferation of differentiation of chondrocyte cells, for stimulating the proliferation of name are utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of cells, for inhibiting the binding of the release of two trimulating the binding of the release of two trimulating the binding of the release of two trimulating the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the release of tumour in a mammal. The tumour is lung, colon, breast, cells, for stimulating genomic and cDNA nucleotide sequences or artisense probes. (1) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polymucleotide (II) encoding (I) is useful in the development and screen mapping, in generating of therapeutically useful reagents, in gene therapy, for preparation of PRO polypeptide, for generating transgenic animals or chromosome identification, as chromosome marker, and for generating of chromosome identification, as chromosome marker, and for generating concept of the sequence encodes confinity purification of RO from recombinant cells ulture or natural confinity purification of RO from recombinant cells ulture or natural confinity purification of RO from recombinant cells ulture or natural confinity purification of RO from recombinant cells ulture or natural confinity purification of RO from recombinant cells ulture or natural confinity purification and transmembrane RO polypeptide.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the polification or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular blology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also GTCCATAGAGACGAACAGAATGAGACCTTCCGGCCCAAGCGTGGCGCGCGGGGCACTTG 1620 Human; gene; ss; PRO; secreted polypeptide; transmembrane polypeptide; tummour necrosis factor-alpha; TNF-alpha; chondrocyte cell; tummour; cancer; adrenal; lung; colon; breast; prostate; rectum; kidney; cervix; liver; microvascular endothelial cell; glucose; PFA; skeletal muscle cell; adipocyte cell; pericyte cell; inner ear utricular supporting cell; T-lymphocyte cell; endothelial cell tube formation; bone disorder; artilage disorder; sports injury; proteoglycan; articular cartilage defect; osteoarthritis; rheumatoid arthritis; haemoglobin-associated disorder thalassaemia; immune system cell infiltration. be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are reagents. The PRO polypeptides or antibodies are used in preparing a redicament for treating a condition responsive to the polypeptides or antibodies, and inhibiting proliferation of medicament for treating a condition responsive to the prolypeptides or antibodies, and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of glucose or FPA by skeletal muscle cells or adipocyte cells, for stimulating proliferation of or gene expression in periotyte cells, for stimulating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducting endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and artilage are useful for treating sports related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-completed disorders such as various thalassemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the retecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymidetides are useful in molecular biology, including uses as colon, breast, probes, in chromosome and gene mapping, in generating antiense RNA and DNA and in gene therapy. The polymucleotides may also antiense RNA and DNA and in gene therapy. The polymucleotides may also continue the proposition of the polymorleotides of the used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful conflictation of stimulating and inhibiting proliferation of number eating and inhibiting proliferation of of number ear utricular supporting cells, for stimulating cells, for stimulating endothelial cells or adipocyte cells, for stimulating cells, for inducing endothelial cells useful and profice cells, for stimulating cells, for inducing endothelial cells to a supporting and proteoglycans cells, for meantilise and volve eartilage disorders such as sports injuries and arthritis and rheumatoid arthritis and rheumatoid arthritis and rheumatoid arthritis properties. Osteoarthritis and rheumatoid arthritis sports. Human; gene; ss; PRO; secreted polypeptide; transmembrane polypeptide; tumour necrosis factor-alpha; TNF-alpha; chondrocyte cell; tumour; cancer; adrenal; lung; colon; breast; prostate; rectum; kidney; cervix; liver; microvascular endothelial cell; glucose; FFA; inner ear utricular supporting cell; pericyte cell; endothelial cell tube formation; bone disorder; cartilage disorder; sports injury; proteoglycan; articular cartilage defect; osteoarthritis; rheumatoid arthritis; haemoglobin-associated disorder thalassaemia; immune system cell infiltration. New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver tumors. Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, G Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z; Human PRO polynucleotide SEQ ID NO 375.                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480
                                                                                                                                                                                                                       AAGAAAAAATCATGAAAACCATCCAGCCAAAATGCACAATTCTATCTTTGGGCAAT 180
                                                                                                                                                                                                       polypeptides are also useful for treating various mammalian haemoglobin-
associated disorders such as various thalassaemias and conditions which
may benefit from enhanced local immune system cell infiltration. This
sequence represents a human PRO polynucleotide of the invention. Note:
The sequence data for this patent is also available in electronic format
from USPIO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                        241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGCGCCACCTCAG

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis a factor-alpha (TWR-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, coliferation or differentiation of chondrocyte cells and a method for proliferation presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, in generating the probaring pRO plypeptides by recombinant techniques and in colon, breast probably and in gene therapy. The polymucleotides may also antisense RNA and BNA and in gene therapy. The polymucleotides may also constraing either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful as tumours, for stimulating inhibiting proliferation of or gene expressors, to adipocyte cells, for stimulating of thuman microvascular endothelial cells, for middlating the uptake of stimulating differation of inner ear utricular supporting cells or T-lymphocyte cells, for stimulating the proliferation of inner ear utricular supporting expense of professions of independent and supporting ear useful for treating various meaning and cartings and atticular cartilage are useful for treating various mammals and condition. Note: the propressor as human PRO polympeptides or allo useful sorterating various mammals and condition. We sequence tespersents a human PRO polympeptides or the profession of the sequence data fo nucleic acids, useful chromosome markers, Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, G Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Mood WI, Zhang Z; v secreted and transmembrane PRO polypeptides and gene therapy, in chromosome and gene mapping, as tissue typing, and in identifying chromosomes. New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver tumors.

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the actoralpha (TNR-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and inver tumours). The polynucleotides are useful in molecular biology, including uses a hybridisation probes, in chromosome and gene mapping, in generating chybridisation probes, in chromosome and gene mapping, in generating chybridisation probes, in chromosome and gene mapping, in generating che used in preparing PRO Polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of theman microvascular endothelial cells, for modulating the uptake of glucose or PRA by skeleral muscle cells, for stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating various bone and/or cartilage disorders such as sports injunities and cells, for artitlage disorders such as sports injunities PRO polypeptides which stimulate the release of proteglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthilis and rheumatoid arthritis. PRO polypeptides which stimulate the release of proteglycans articular cartilage defects, osteoarthritis and chemical immune system cell infilteration. The sequence data for this patent is also ava from USPTO at segdata.uspto.gov/sequence.html.

WPI; 2003-755075/71. P-PSDB; ADB36149 New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver tumors.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, luig, color, breast, prostate, rettal, kidhey, cervical and liver tumours). The polynucleotides are useful in molecular bloiogy, in generating thybridisation probes, in chromosome and gene mapping, in generating color, breast, prostate, rectal, kidhey, cervical and liver tumours). The polynucleotides are useful in molecular bloiogy, in generating the problem bloiogy in generating color, breast, prostate and screening of knock-out animals which are a useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful structured by a tumours, for stimulating of interpating a condition responsive to the polypeptides or medicanent for treating a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or from the development muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating differation of organ muscle cells or adipocyte cells, for stimulating attentiation of ane expression in periotyte cells, for stimulating and condition cartilage are useful for treating various mammals and condition. The problems are useful for treating various mammals and condition. The associated disorders such as various thalassaemias and condition. The sequence expression in properting cells or a finance of the invention. Note: the sequence expression and propremented or the problems of the sequence represents a human PRO polymulation of the invencion. The sequence represe

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the crelease of TWF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adiporte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of adifferentiation of adipocyte cells, for stimulating proliferation of adifferentiation of adipocyte cells, for stimulating proliferation of adifferentiation of adipocyte cells, for stimulating proliferation of adifferentiation of adipocyte cells, for inhibiting the binding cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cervical or liver to cells, for other proceins or molecules involved in binding interaction. A polymelecide (II) senceding (I) is useful in chromosome cervical cervical or molecules involved in binding interaction, a polymelecide (II) encoding (I) is useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome interaction, in specific cells, tisques or serum, and for detecting its expression in specific cells, tisques or serum, and for a novel human secreted and transmembrane PRO polypeptide.

541

The invention describes an isolated secereted and transmembrane PRO

CC polypeptide (I). PRO polypeptide such as PRO213, PRO700, PRO320 or PRO615

CC is useful in biotechnological and medical research, as well as in various

industrial applications. PRO polypeptide such as PRO300, PRO866, PRO703,

CC PRO600 or PRO846 is useful for therapeutic purposes. PRO9613, pro615, PRO913,

CC PRO500 is useful for the treatment of wound healing, tissue growth and

CC muscle generation and regeneration. PRO313 is useful for treating

amyotrophic lateral sclerosis, neuropathy, AIDS-associated neuropathy or

CC diabetic peripheral neuropathy. A polynucleotide (II) encoding (I) is

CC useful for generating transgenic animals or knockout animals which are

CC useful in the development and screening of therapeutically useful

CC reagents, as probes for generating a pool of sequences for identifying

CC reagents, as probes for generating a pool of sequences for individuals which encodes the PRO and for the genetic analysis of

individuals with genetic disorders, for recombinantly expressing (I) and

CC contromosome identification. (I) is useful as molecular marker for

CR or chromosome identification. (I) is useful as molecular marker for

CR or chromosome identification. (I) is useful as molecular marker for

CR or chromosome identification. (I) is useful as molecular marker for

CR or chromosome identification. (I) is useful as molecular marker for

CR or chromosome identification in diagnostic assay of sample

CC (antagonists). (I) and (II) are useful in diagnostic assay of sample

CC (antagonists). (I) and (II) are useful in diagnostic assay of sample

CC (antagonists). (I) and (II) are useful in diagnostic, assay of sample

CC (antagonists) are useful in diagnostic assay of sample

CC (antagonists) are useful in diagnostic, assay of sample

CC (antagonists) are useful in diagnostic, assay of sample

CC (antagonists) are useful in diagnostic, assay of sample

CC (antagonists) are useful in diagnostic, assay of sample

New isolated secreted and transmembrane PRO polypeptides, useful in the preparation of a medicament for treating a condition responsive to the polypeptide, and as therapeutic agents e.g. vaccines.

Claim 2; SEQ ID NO 522; 467pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal

ptide, a PRO extracellular domain with or withoubtide). Also included are nucleic acids encoding trioned above, a vector comprising a PRO nucleic marsting the vector and producing PRO, a chimaer of used to a heterologous amino acid sequence, a libody. PRO337 polypeptide is useful for detectilypeptide in a sample suspected of containing PR hilarly, PRO4993 polypeptide is useful for detectilypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detectilypeptide. PRO739. PRO4993 polypeptide is useful for detectiles propertide, and PRO1559 polypeptide is useful example active molecule to a cell expressing PRO337 polybeptide is us active molecule to a cell expressing PRO337 polybeptide is the toxin, radiolabel, or an antibody.                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                            8 8
                                                          ઠે
                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising PRO, a chimaeric molecule comprising PRO is the propertied of a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4993 polypeptide. In a sample suspected of containing PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO4937 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting

ansmembrane PRO polypeptides, useful in the r treating a condition responsive to the c agents e.g. vaccines.

English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequence as given in the specification (including PRO lacking its associated signal peptide, Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acids encoding the PRO proteins comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide.

(GETH)

The invention describes an isolated secereted and transmembrane PRO polypeptide (I). PRO polypeptide such as PRO213, PRO700, PRO320 or PRO615 is useful in biotechnological and medical research, as well as in various industrial applications. PRO polypeptide such as PRO300, PRO666, PRO703, PRO608, PRO310, PRO615, PRO615, PRO618, PRO7010, PRO666 or PRO616 is useful for therapeutic purposes. PRO6163 is useful therapeutically in vivo for lessening the effects of viral infection. PRO200 is useful for the treatment of wound healing, tissue growth and muscle generation and regeneration. PRO337 is useful for treating | TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC 420 480 540 540 600 Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton DL; Ferrara N, Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME; Goddard A, Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ; Kljavin IJ, Kuo SS, Napier MA, Pan J, Paoni NF, Roy MA, Shelton DL; Stewart TA, Tumas D, Williams PM, Wood WI; Novel isolated secreted and transmembrane PRO polypeptides, useful in the preparation of a medicament for treating a condition responsive to the polypeptide, and as therapeutic agents e.g. vaccines. 240 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCCGGCAGGGGGGAGAGCGCCACCCTCAG 300 361 TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC 420 GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC 480 99 99 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAGGCTTGAGGCAACAC 60 421 GCAGTACAGCATCGAGAACGTGGAAGTGTATGACGAGGGCCCTTACACCTGCTC 181 CTTCACGGGGCTGGCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGGAGGTGCCGTGCGGGAGATGC

The PRO polypeptides and polynucleotides are useful as pharmaceuticals, diagnostics, blosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF)-alpha from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, PRO; gene, ss; secreted polypeptide, transmembrane polypeptide, tumour; cancer; lung; colon; breast; prostate; rectum; liver; tumour necrosis factor-alpha; TNF-alpha; blood; chondrocyte cell; pericyte cell; dermal fibroblast; bone disorder; cartilage disorder; arthritis; sports injury; cytostatic; antiarthritic.

blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of conversal pericyte cells or for stimulating the proliferation of normal human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating transgenic animals or knock-out animals which technology, in generating transgenic animals or knock-out animals which reagents, in gene therapy, in chromosome identification, as chromosome continuous and in generating probes. The PRO polypeptides, or anti-PRO cartibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-disorders (e.g. arthritis, sports injuries), involving inducing the re-differentiation of chondrocytes. The PRO polypeptides are useful as condition markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polymucleotide of the invention.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymerotides encoding them.

Cransmembrane polypeptides and the PRO polymucleotides encoding them. diagnostics, biosensors or bioreactors. They are particularly useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour) in a mammal, for stimulating the proliferation or differentiation of themolating the proliferation of or gene capression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of corganic probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant tehnology, in generating transgenic animals or knock-out animals which reagents, in gene therapy, in chromosome identification, as chromosome condition which is responsive to the PRO polypeptides, or anti-PRO antibodies, and as pericyte-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the recombinant condition which is responsive to the PRO polypeptides are useful as disorders (e.g. arthritis, sports injuries), involving inducing the rectal disorders (e.g. arthritis, sports injuries), involving inducing the rectal disorders (e.g. arthritis, sports injuries), involving inducing the rectal disorders (e.g. arthritis, sports injuries), involving inducing the rectal disorders (e.g. arthritis, sports injuries), involving inducing the rectal disorders (e.g. arthritis, sports injuries), involving inducing the rectal disorders (e.g. arthritis, sports injuries), involving inducing the rectal disorders (e.g. arthritis, sports injuries), involving inducing the rectal differentiation of chondrocytes and the properties of the properties of the in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            420

WPI; 2003-801172/75. P-PSDB; ADC71964. New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymuclectides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of plucose or FFA (free fatty acid) by skeletal muscle cells or adipocyte cells, for stimulating differential call muscle cells, for stimulating proliferation of or gene expression in pericyte cells, for

stimulating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage defects, ostoarchitis and rheumatoid arthritis. ARO polypeptides are useful for treating sports-related joint problems, articular cartilage defects, ostoarchitis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html. 300 300 360 420 420 480 480 540 540 900 009 099 099 720 720 780 780 840 120 180 240 GIGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA 360 9 9 1 GITGIGICCTICAGCAAAACAGIGGATITTAAAICTCCTIGCACAAGCTIGAGAACAACA GTTGTGTCCTTCAGCAAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGAGCGCCACCCTCAG GGTCACCGTGAACTATCCACCATACATTTCAGAAGCCAAGGGTACAGGTGTCCCCGTGGG 121 AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCCGCAGGGGGGAGAGAGCGCCACCCTCAG TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCCAAAAC GTGCAGACAGACAACCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATTCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC AGGGGACTACGAGTGCCTCCAATGACGTGGCCGCCCCGTGGTACGGAGAGTAAA GTGCACTATTGACAACCGGGTGACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA gcaeracacerceagarccagaacercearererareaceaegecerracacere GGTGCAGACAGACCACCCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT CTTCACGGGGCTGCTCTGTGTCTTCCCAAGGAGTGCCCCGTGCGCAGCGGAGATGC GCAGTACAGCATCGAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC Gaps · 0 Length 1679; Sequence 1679 BP; 498 A; 432 C; 419 G; 330 T; 0 U; 0 Other; Indels Query Match 100.0%; Score 1679; DB 1; Best Local Similarity 100.0%; Pred. WPI; 2003-801170/75. P-PSDB; ADC59943. New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer

Claim 2; Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the persence of a tumour in a mammal (e.g. adremal, lung, certoral and invertumours). The detecting the presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polyuncleotides are useful in molecular biology including uses as thy bridisation probes, in chromosome and gene mapping, in generating of physicians by recombinant techniques and in colon probes in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful so the propagation of thuman microvascular endothelial cells, for modulating the uptake of a condition responsive to the polypeptides or antibodies are used in preparing of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA (free fatty acid) by skeletal muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating orbiferation of inner ear utricular supporting cells or stimulating orbiferation of inner ear utricular supports. Constitution and for stimulating various bone and/or cartilage defects, osteoarthritis and rheumatoid cummanian haemoglobin-associated disorders such as various themmanian propertion. This sequence represents a human FRO polympude cells for infiltration. T

The invention describes an isolated PRO (secreted and transmembrane)

CC polypeptide (1). PRO982, PRO1160, PRO1187 or PRO132 polypeptide are
useful for stimulating the proliferation of or gene expression in

CC for stimulating the proliferation of differentiation of chondrocyce

calls. PRO321, PRO725, PRO125, PRO1155, PRO1195 polypeptide are useful

CC calls. PRO31, PRO357, PRO125, PRO1195, PRO1199 polypeptide

calls. PRO131, PRO357, PRO1155, PRO1155, PRO1199, PRO1199, PRO1199

CC are useful for stimulating the release of tumour nerrosis factor (TMF)-

alpha from human bhood. PRO9182, PRO315, PRO1191, PRO1191, PRO1190,

CC PRO1286, PRO1319, PRO1156, PRO1195, PRO1194, PRO1191, PRO1191,

CC PRO1286, PRO1319, PRO1165, PRO1195, PRO1179, PRO1191, PRO1191,

CC PRO1181, PRO1186, PRO1186, PRO1195, PRO1174, PRO1191, PRO1191,

CC PRO1887, PRO1187, PRO1196, PRO1197, PRO1197, PRO1191, PRO1191,

CC PRO1887, PRO5182, PRO1184, PRO1191, PRO1191, PRO1191, PRO1191,

CC PRO1887, PRO5182, PRO1184, PRO1196, PRO1191, PRO1191, PRO1191,

CC PRO1887, PRO5182, PRO1184, PRO1196, PRO1191, PRO1191, PRO1191,

CC PRO1887, PRO5182, PRO1184, PRO1194, PRO1191, PRO1191, PRO1191,

CC Inhibiting the proliferation of normal human dermal fibroblast cells. PRO

CC Inhibiting the proliferation of normal human dermal fibroblast cells. PRO

CC Inhibiting the proliferation of normal human dermal fibroblast cells.

CC Arre useful for decenting the presence of tumour in a mammal mine

CC Inver tumour. (I) is useful as molecular weight markers, for tissue

CC tumour, colon tumour, breast tumour, present tumour, recenting agents. A polymoredicate tumour; rectal tumour.

CC Typing, or as therspeutic agentes. PRO51272, PRO4405 polypeptide

CC CA PRO5189 PRO5189 PRO5187, PRO51872, P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

```
inhibiting the proliferation of normal human dermal fibroblast cells. PRO polypeptides such as PRO6004, PRO491, PRO1174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, bareat tumour, profette tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymoclectide (II) encoding (I) is useful for Anomosome and gene mapping or gene therapy. (II) is useful for Anomosome and gene mapping or gene therapy. (II) is useful correcting useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide secenting useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide sport injuries). This sequence encodes a human secreted and transmembrane processed and transmembrane.

(GETH) GENENTECH INC.

Baker KP, Desnoyers L, Gerritsen ME, Goddard A, Godowski PJ; Grimaldi JC, Gurney AL, Smith V, Stephan JF, Watanabe CK, Wood WI;

WPI; 2003-801157/75. P-PSDB; ADC47453. New PRO polypeptide for use as molecular weight markers for protein electrophoresis purposes and for detecting the presence of tumor in a mammal.

Claim 2; Fig 125; 314pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO187 or PRO1329 polypeptide are

completed to stimulating the proliferation of or gene expression in

periotyce cells. PRO377, PRO222, PRO1272 or PRO4165 polypeptide are useful

cor stimulating the proliferation of differentiation of chondrocyte

cells. PRO337, PRO525, PRO1155, PRO1156, PRO149 polypeptide

are useful for stimulating the release of tumour necrosis factor (TNF)
alpha from human blood. PRO982, PRO3157, PRO125, PRO1196, PRO149, PRO214,

PRO127, PRO137, PRO526, PRO3157, PRO125, PRO1196, PRO149, PRO1419,

PRO127, PRO1337, PRO526, PRO316, PRO8197, PRO1197, PRO1419, PRO1316,

PRO125, PRO1181, PRO1186, PRO1186, PRO1197, PRO1197, PRO1181, PRO1326,

PRO125, PRO1330, PRO9183, PRO1186, PRO1187, PRO1197, PRO1404, PRO1326,

PRO125, PRO1328, PRO4341, PRO1186, PRO1197, PRO1197, PRO1416, PRO1326,

PRO1989, PRO5938, PRO9186 or PRO1069 polypeptide are useful for

trimulating the proliferation of normal human dermal fibroblasts cells.

PRO5934, PRO525, PRO7184, or PRO1196, PRO1433, PRO432, PRO4326,

PRO181, PRO525, PRO7184, or PRO1197, PRO1486, PRO4322,

CC PRO181, PRO525, PRO7184, or PRO1194, PRO1174, PRO5778, PRO4322,

PRO5934, PRO5938, PRO5184, or PRO1194, PRO1174, PRO5778, PRO4322, etc.,

PRO5934, PRO5938, PRO5184, or PRO1194, PRO1714, PRO5778, PRO4322, etc.,

PRO5934, PRO5938, PRO5184, PRO1194, PRO1714, PRO5778, PRO4322, etc.,

PRO5934, PRO5938, PRO5184, PRO1194, PRO5778, PRO5938, PRO5778, PRO5938, etc.,

CA inhibiting the proliferation of normal human dermal fibrobast cells.

CC inhibiting the proliferation of formal human dermal fibrobast cells.

CC inhibiting the proliferation of formal human dermal fibrobast cells.

CC Involves comparing the level of expression of the above PRO polypeptides

CC Involves comparing the presence of tumour in a mammal which

CC Involves oppragned as malecally Profession of the propertion tumour, breast tumour, in the mammal. The tumour is luminated as the presence of tum

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to novel nucleic acids encoding human PRO secreted
and transmembrane proteins. Extracellular proteins play important roles
to the formation, differentiation and maintenance of multicillular
corganisms. The fate of many individual cells (for example proliferation,
corganisms. The fate of many individual cells (for example proliferation,
migration or differentiation) is typically governed by information
corporated from orber cells and the immediate environment. The information
cis often transmitted by secreted polypeptides (for example mitogenic
factors, survival factors cytotoxic factors, differentiation factors,
neuropeptides and hormones) which are received and interpreted by diverse
cell receptors and membrane bound proteins. These membrane bound proteins
and receptors may be of use as pharmaceutical and diagnostic agents, such
and receptors may be of use as pharmaceutical and diagnostic agents, such
corporates the amino acid sequences of novel human membrane bound receptors
and proteins, along with the CDNA sequences encoding them. The novel
corporation of chondrocytes. The nucleic activities through the
constitution of chondrocytes. The nucleic activities through the
constitution of chondrocytes. The nucleic acids of the invention may be
constituted for the manufacture of a medicament for diagnosing or treating a
cumour in a mammal. In addition, they may be useful for measuring or
detecting the expression of a tumour associated gene. The present
constitution of the manufacture of a tumour associated gene. The present

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicallular organisms. The fate of many individual cells (for example proliferation, capanisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information considered from orber cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, call receptors and hormones) which are received and interpreted by diverse call receptors may be of use as pharmacentical and diagnostic agents such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be tumbur in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present consideration of the present consideration of the mannial at the expression of a tumour associated gene. The present consideration of the mannial consideration of the mannial consideration of the measuring or detecting the expression of a tumour associated gene. The present consideration of the mannial consideration of the measuring or expense the mannial consideration of a tumour associated gene. The present consideration of the mannial consideration of a tumour associated gene. WPI; 2003-801152/75. P-PSDB; ADC60495 PRO nucleic acid, useful for preparing a recombinant PRO polypeptide for manufacturing a medicament for diagnosing or treating tumor. New and

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polypucleotides encoding them. The

invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpa (TNF-alpa) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for cond. Dreas, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating a attisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful regents. The RNO polypeptides or antibodies are used in preparing of medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA (free fatty acid) by skeltal musche cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, or Tlymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of prochems, articular cartilage are also useful for treating various conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polypucle of the infiltration. Note: The sequence expression of problems, articular cartilage defects, osteoather is also available in clientering tormat from USPTO at seqdat 120 180 180 240 240 300 300 360 360 420 480 GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC 480 540 TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC 420 GGTGCAGACAGACAACCACCCAAAGACTCTAGGGTCCACCTCATTGTGCAAGTATCTCC 540 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAAATCTCCCTTGCACAAGCTTGAGAGCAACACA 60 GITGIGICCITCAGCAAACAGIGGAITITAAAICICCITGCACAAGCITGAGAGCAACAC 60 121 AAGAAAAAAAACATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCCTCAG CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGGCGCCACCCTCAG 301 GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCCAAAC AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT CTTCACGGGGCTGGCTGTCTGTGTTCTTTCCAAGGAGTGCCCGTGCGCAGCGGAGATGC CTTCACGGGGGCTGGCTGTTCTTTCCAAGGAGTGCCCGTGCGCAGCGAAAGAAGC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA GGTGCAGACAGACCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC 0; Gaps Query Match 100.0%; Score 1679; DB 1; Length 1679; Best Local Similarity 100.0%; Pred.
